

DPS 450

Test and Calibration Interface Box

Description:

The **DPS 450 Test and Calibration Interface Box** is a single test device that can communicate with ETDs, HTDs, Linkers, and Repeaters. A single USB cable to a computer provides point to point cabling to the radio service monitor and device under test. This simplifies the test station and reduces complexity in troubleshooting cables.

Connection to the device being tested is achieved by one of 3 included unique cables to test DPS ETDs, Linkers, HTDs & Repeaters. This allows for one test station to easily switch between testing most DPS Devices.

Features:

- RS232 to USB Adapter - Communication with ETD Software
- ETD audio via BNC connector - Measure receive audio, SINAD
- Ritron 1 Wire programming adapter
- PTT Trigger for Repeaters
- RS232 - HTD LSI Communications or Competitor Devices
- Extra USB port to download logs
